PROJECTS

Udemy: Learned React by taking the React – The Complete Guide Course from Udemy and exercised my skills by re-creating the course projects from scratch. (December 2021)

Zahn Innovation Center: Participated in an accelerator to gain knowledge on how to make a successful startup as well as finding a niche market that can benefit from our product. Used Angular and Firebase for the web application and Java for the mobile application to attempt and create a software for restaurants to adapt a paperless menu by using QR Codes. (February 2021 – May 2021)

Snikie: Used Angular as the frontend and Firebase for the backend to create a web application. Giving students the ability to locate a place to rent with a roommate that a homeowner has put their property up for renting. (Winter 2019)

WORK EXPERIENCE

ViacomCBS - CBSNews	June 2021 – August 2021
<i>Web Developer Intern</i>	

- Developed a soft login gate by utilizing vanilla JavaScript to appear in articles for returning users to sign up or login to their account for personalized newsletter subscription.
- Redesigned branding for essential article's header while utilizing BEM CSS styling.
- Integrated skimlinks for recommended products in essential articles.
- Implemented tracking events to find the number of unique users with AdBlock turned on.
- Diagnosed bugs and implemented solution with Charles Debugging tool.

Quadrant 2	Manhattan, NY	January 2019 – August 2019
<i>Front End Developer</i>		

- Developed an interactive website with the holy grail design for an upcoming project for the ACLU, using **Angular** framework with Material Design and Bootstrap for responsive design layout.
- Applied a graphical template to their application design projects and documented the source code.
- Tested and improved their template website as a starting point for future web application.
- Practiced the use of MVVM software architecture pattern while developing each website.
